Computer and Information Sciences II

26th International Symposium on Computer and Information Sciences

- ▶ Contains novel advances in state-of-the-art applied research in electrical and computer engineering, information technology and computer science
- ▶ Provides access to the main activities in industry and academia across the world
- ▶ Identifies some of the most active teams both in Europe and Asia

Information technology is the enabling foundation for all of human activity at the beginning of the 21st century, and advances in this area are crucial to all of us. These advances are taking place all over the world and can only be followed and perceived when researchers from all over the world assemble, and exchange their ideas in conferences such as the one presented in this proceedings volume regarding the 26th International Symposium on Computer and Information Systems, held at the Royal Society in London on 26th to 28th September 2011.

Computer and Information Sciences II contains novel advances in the state of the art covering applied research in electrical and computer engineering and computer science, across the broad area of information technology. It provides access to the main innovative activities in research across the world, and points to the results obtained recently by some of the most active teams in both Europe and Asia.
